

# Periphery<sup>AM</sup>

*Asset Management for every organisation.....*

**Periphery<sup>AM</sup>** provides management facilities for asset items for purposes of traceability, audit, safety, or service provision such as off site document archive.

The system provides facilities to manage asset items of almost any type including electrical or computer equipment, fixed plant and equipment, service based management of documents, data tapes, fixtures, tooling, etc. etc.

Scheduled item activity may be defined for monitoring of service tasks, annual audit, or other regular activity.

Benefits include;

- Reduces time allocated to asset management
- Minimises paper forms and data entry
- Implements procedures for scheduled tasks
- Manages disposal and WEEE requirements
- Provides traceability of all asset activity
- Documented customer service compliance
- Open data structures to permit corporate integration

## Periphery<sup>AM</sup>

Where data collection is controlled by software at the point of activity then information may be collected more accurately and without the use of paper forms or manual entry to the host system.

Asset management is often an irregular process using a combination of manual and software processing, a non productive task which becomes urgent when the auditor or regulator is due.

Using a software based procedure possibly with bar coded identification minimises the workload, improves accuracy and reduces the time spent on non added value activity. Increasing requirements from ISO Quality procedures, E.U. Environmental Directives, Corporate responsibility, all demand improved control and tracking of asset items of all types.

### Data Collection Facilities.

With interfaces for fixed, portable or radio based bar code scanners **Periphery<sup>AM</sup>** provides a reliable and accurate method of asset data collection. The system can provide managers with an accurate and up to date view of the asset status within the organisation. If service based then each customer is able to receive detailed information on the activity carried out on their assets.

All portable data collection is closely integrated with the system to ensure all record updates and activity is reliably recorded with the asset register. Demonstrating compliance is a matter of selecting the relevant report, all item activity will be included up to date.

### Warranty, Service & Maintenance.

Premier Solutions works closely with manufacturers to provide a high level of warranty and service for all its products, with the level of response and quality required by users. Systems support is available from Premier Solutions for the lifetime of the system to ensure maximum return on investment.

***Premier Solutions is dedicated to the supply of well designed, well engineered systems and it is our aim to serve you the customer with products and services of the highest quality and integrity.***
